

F.366      tip depth c. 60 cms

23/7/71

"Gully" of redder earth/stone (? bedrock) in NW corner  
of W. leg. This removed - produced gully c. 20 cms deep  
w. soft side ~~the~~ to SE - one frag burnt bone, one frag  
burnt stone.

Position of this in top of gully makes a natural origin  
probable.
