CONTEXT F 561.....

CUTTING B XII CO-ORDINATES: 3A 830 2A 784
East North

DATE EXPOSED Saturday 15th July DATE COMPLETED

COMMENT ~~DESCRIPTION~~ Post hole. One feature opened today F561 is rather strange in that it appeared on the surface as a slight depression and although it is filled with pretty large tumbled rock only some of the edges look cut, while most of the edges look natural. On the other hand it is in a circular shape, and near

MAX. WIDTH AND DIRECTION ... 110cm diameter.

MAX. LENGTH AND DIRECTION

MAX. DEPTH/HEIGHT THICKNESS ... 58cm deep.

COMMENT

the bottom, the lower layers look cut, but the hole here is a much smaller diameter. We shall have to wait until its drawn and the other half removed, for at present I see three possibilities.

a/ that one post hole cuts through another ???

b/ that the lower one is early, and later, rock has tumbled in

c/ that the upper layers were just badly cut, or even perhaps were just frost shattering removed in a circular shape, and the lower layers hewn.
