

F 700 ① (GULL)

Discovered 12/7/72.

Spread of dipples, which seems to be in line with Terry's rabbit warren. Producing bone frags, & flint. Seems on superficial cleaning to be v. porous - not resistant to probing. (See Diag I.)

Cleaned over 14/15/7/72. Edges show as light coloured streaks. Surface finds of all descriptions - flint, pot, pebbles, & cl.

F 700 ②

Clearing of gull to reveal plus, s.l.s.

11  
~~11 1972~~

Finds of pot, bone <sup>Jaws</sup>, flint, etc.
