DESCRIPTION

COMMENT

with chipples layer 3, with larger stones and brown soil on top layer ①. F957 appears to have layers.

layer ① brown soil and stones looking like disturbed bedrock as in F491.

layer ② "red"/brown soil sticky - not more than 5cm thick -

soil sample taken though certainly slightly contaminated by layer ③ Only contains small stones?

layer ③ yellow/white "chalky" substance found with chipples (as in gull in BXII (1)) - probably entirely natural - possibly just where gull runs through. Gull has layer ② of F957 but instead of going into

P.T.O

into ③ (of F957) has yellow chipple layer.
~~Only minute scraps of charcoal and daub in layer ①.~~ ↓ COMMENT
I now think it is all natural perhaps, by a tree growing in the fissure
disturbed
