ASSOCIATED FEATURES It may be associated with 1159 hearth, since it seems to cut the "stony platform". However, it lies at a considerable distance from the hearth - probably outside the area of the putative house surrounding the hearth.

COMMENT

Description continued

light brown soil matrix. No certain sides were found, although the base seemed to be bedrock, at forty-five cm (45cm) below the top. ~~It cuts the stony platform.~~

PHASING

P.T.O.

Two drawings inc p.38 + p.48.

Description continued

Rock-cut sides were found further down and further to the North, indicating that the rubble of the "Stony Platform" had been disturbed ~~had been disturbed~~ around the post hole. A possible fibula was recovered from the upper stone fill of the post hole, and may reasonably be ascribed to this fill and not to the Stony Platform. However, it may have dropped in during the disturbance for the post hole.

ASSOCIATED FINDS A possible fibula.
