ASSOCIATED FEATURES

ASSOCIATED FINDS Bone, potCOMMENT It wasn't at first clear that the chipped - (4608 (2))
was under the possible wall 4608 (3), rather than abutting
against it - so they were numbered in what turned out to
be the wrong order! - hence 4608 (2) was renumbered
4616 and 4608 (3)

PHASING

SECTION:

NOTES/PHOTOGRAPHS:

As the stones ~~were removed~~ the black soil between them was removed + ~~to~~ all kept for environmental analyses. ~~Samples were taken~~ The samples' co-ordinates give the approximate location of each sample.

When ~~removed~~ fully exposed ~~there were~~ a few of the stones proved to be very large i.e. c. 30 x 40cm, + 30 x ~~25~~ 30cm & c. 5cm thick.
