

^

Noted 1.80m from AA towards BB, <sup>(at 20cms below turf)</sup> a possible change in texture, from yellowish medium stones and soil, to a smaller gritty soil. Possibly shows an edge N-S

F1930 when further excavated revealed an approximately straight edge on N side, running E-W for 50 cms. The edge to a depth 25cms appeared to be natural rock. The western half of the cutting seemed to show a similar line, tho' it has not yet been cleaned.

6.8.75. Continued trowelling over area in layer (3) Large quantity mixed bones in one area. Laid out 2 metre area continuing trench cut in C.V and took off remainder of layer (3) within the lines. In majority of area leached stone appeared in even surface. One area appears to be bedrock at higher level.

F1935 A small subcircular earthy area at the same level as the top of (4) against the rock mentioned above. Approx centre AA 5.30 BB 4.86. Half sectioned and taken out. Believe natural fault

F1936 Area of disturbed stones in level (3) revealed by trowelling. Half sectioned and taken out. Natural rock. Poss fault or ditch edge
