If no, explain why.....

Geobase code:

DESCRIPTION

...packed in layer of medium + large angular stones, mostly med. in light brown soil. Occasional burnt stones. This sits on an apparent shelf cut into the bedrock. At the NW end is D95. The rubble becomes much larger and tips/pitches downwards.

Comments

...foundation platform rubble for 1st phase (period 2) rampart, of which 10763 is the rear (south facing) wall. The very large slabs at the NW end of this layer seem to be the same material as 10766
