CUTTING B II CO-ORDINATES: East..... North.....

DATE EXPOSED Monday 12th July DATE COMPLETED

DESCRIPTION Palisade slot / "gully". The "gully" between the ragstone in the South East corner and the exposed crumbly yellow limestone in the centre was trowelled out to the North. Throughout, the edge of the ragstone is vertical and 15cm high. The "gully" curves in a manner reminiscent of ↓

ASSOCIATED FEATURES

ASSOCIATED FINDS Several Sherds

~~COMMENT~~

"Crickles". This "gully" is now known as feature no. 253. Several sherds, which were of a more oxidised fabric than the pottery from the chipple layer were found in the fill of the gully. This fill consists of a mixture of chipples and topsoil.

~~PHAGING~~

COMMENT

The "gully" has none of the appearance of a drainage gully. It has a possible function, however as a palisade slot
