Description continued

F. 1470 was a double post hole dug into the joint F. 1179. Its small stone/brown soil infill was topped by a group of burnt stones of medium size, one of which was possibly a piece of May Hill type small stones. The post hole does not match any other in this cutting.

F. 1470 is a double post hole, but it was not possible to One drawing inc.

Description continued

determine which hole was cut first, since both shared a common bottom.

A possible twin to this ~~possible~~ post hole might be F. 1454
[see P. 91].
