COMMENT

I dealt with by Terry, who says it was "under the edge of 7256" and "of no consequence". Actually, it's a bit far w. to be part of 7256; it's more likely to relate to 7523. It seems possible, in any case, that it once formed part of the vestigial wall 7218/7522/7523, which may have joined 7256/7548 just s.e. of 7200.
