COMMENT S.W. end of 2659 appears to be cut into different material. Possibly geological fill of geological fault. Difficult to determine cut edges. Iron Age ~~parts~~ parts appeared as usual. Some were cut wholly ~~into~~ into bedrock, but those on the bank side were all cut into ditch. F 2654 did not appear until ditch layers ②+③ were picked out. Despite vast quantities of PHASING pottery in the area. When exposed to the air, the sides showed a dark grey/blue against the undisturbed ditch fill.
