COMMENT

P.T.O. Sketch plan.

old excavation Does not appear to be more than layered stone with ones at ~~str~~ natural angles in orange brown sandy silt - all very similar to 8518(2) 8514(2)

But this layer 8542 does seem to go on to ~~two~~ South + east, so where we first identified it, appears to have been merely a northward spread over 8533 - i.e. the layered stone seen in Section is in fact 8533

In retrospect, I realize 8527 should have been split into at least two distinct ^{contexts} groups - a Northern one and a western one, separated by 8561 and 8504, and posthole 8547/8546. Perhaps the western 8527 ought to have been labelled 8542.
