COMMENT

PHASING

7984

Burning - flecks throughout feature above level of slabs but no apparent concentration. Density shown on section is about right.

Finds - most finds from general level shown on section.

~~Heavy~~ "Heavier concentrations on S side of feature.
"Sterile" beneath slabs - but see a burnt nut below.

Burnt nut - omnipresent, including some from below "slabs" -

Bone - burnt/unburnt - largest piece about matchbox size.

Teeth - 3 good ones - two pre-molars(?) in frags plus one complete incisor from approx same level - bagged with assoc bone. All three burnt.

Flint - nothing that looked exciting.

Pot - one piece of "grot pot".

Soil samples - see section for approx levels.
