COMMENT

Probably not a Feature, appearance caused by close proximity of stakeholes, F2964 - F2967. ~~What appeared~~ what appeared on the surface to be a very clear posthole turned into a somewhat doubtful post hole with a number of stakes in its bottom. If it was a posthole ~~it must~~ it must have been very shallow and from the excavation of similar looking Features it would appear that where a number of stakeholes lie close together, the surface appearance

P.T.O ~~the stakeholes~~

may be that of a small posthole.

All the features present here had a fill of the brown soil with chipple 'gull'; Site layer (3) and were cut into the "bedrock gull".
