COMMENT Only remains in the baulk, the rest having been removed in CH 78 or 79. It must have another number, which I have not been able to trace - and as samples were being taken I had to make sure that it was quite clear where they were coming from.

PHASING This layer appears to be wash from the slope to the south of the mound, and clearly in fact - ~~is~~ CH 78 + CH 79 site layer ② - not entirely clear from the notes, & not all the sections are here on site to check from.
