COMMENT

~~XXXXXXXXXXXXXXXXXXXX~~ This layer was originally taken to be weathered bedrock, but its burnt nature suggests otherwise. The gull ~~area~~ of X94 appears to have been covered with a (?) levelling layer before the building of the bank. Most importantly, the burnt patch 6936 underlies this layer. Further, the layer appears to run over the top of causewayed ditch 6912, 6914 etc.  
In Plan 9, some material is still labelled 6933, as no  
overlay (over →)

change was found with the removal of a spit.
